2002-1021 P

International application No. PCT/EP2003/011857 IMPORTANT NOTIFICATION

International filing date (day/month/year) 24 October 2003 (24.10.2003)

Applicant

OCE PRINTING SYSTEMS GMBH et al

1. Transmittal of the translation to the applicant.

The International Bureau transmits herewith a copy of the English translation made by the International Bureau of the international preliminary examination report established by the International Preliminary Examining Authority.

2. Transmittal of the copy of the translation to the elected Offices.

The International Bureau notifies the applicant that copies of that translation have been transmitted to the following elected Offices requiring such translation:

None

The following elected Offices, having waived the requirement for such a transmittal at this time, will receive copies of that translation from the International Bureau only upon their request:

EP, JP, US

Reminder regarding translation into (one of) the official language(s) of the elected Office(s).

The applicant is reminded that, where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report.

It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned (Rule 74.1). See Volume II of the PCT Applicant's Guide for further details.

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

Interactional application No.
PCT/EP 03/11857

v.	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement						
1.	Statement						
	Novelty (N)	Claims	1-15	YES			
		Claims		NO			
	Inventive step (IS)	Claims	1-15	YES			
		Claims		NO			
	Industrial applicability (IA)	Claims	1-15	YES			
		Claims		NO			

2. Citations and explanations

1. Reference is made to the following document:

D1: US-B-6 215 511

Document D1 discloses (see in particular column 15, 2. line 11 to column 16, line 62, figures 4 to 19, and claims 1 to 5) a device and method for producing a charge image on a mounting in an electrophotographic printer, using a character generator 27 with a plurality of light sources 31 arranged in a row. The row of light sources forms an illumination line on the mounting, and the mounting is moved relative to the character generator in a direction running transverse to the illumination line. The lightemission phases of the groups of light sources 31 are timed to start in such a way as to minimise the extent to which the illumination line deviates from a setpoint line. Each group of light sources 31 has its own functional unit 60-68 for controlling the light sources. The light sources in each group are controlled by the functional unit belonging to the respective group.

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

Interional application No. PCT/EP 03/11857

- 3. The subject matter of independent claims 1 and 10 differs from this prior art in that the functional unit of each light source group contains an address decoder and has an address by means of which it is controlled by a central control unit, and also in that it contains its own control unit. The advantage of this is that the timing of the light-emission phase can be kept completely separate from the rate at which the print data is transmitted to the functional units.
- 4. None of the available prior art documents suggest a method of this kind for controlling the groups of light sources. The subject matter of claims 1 and 10 therefore meets the requirements of PCT Article 33(2) and (3).
- 5. Claims 2 to 9 and 11 to 15 are dependent on claims 1 and 10 respectively and therefore also meet the PCT requirements in respect of novelty and inventive step.
